New Relic

Business monitoring involves tracking and analyzing business performance. Business monitoring is important for many companies. That helps them solve some issues. Indeed, monitoring software makes it possible to have visibility on computer systems, to be able to solve or anticipate problems, that is, detect, diagnose and solve the problem.

Among the most suitable and best known software monitoring for this kind of system, New relic is one of the software monitoring that is considered one of the best according to Better Stack". New Relic is a software that was created in 2008, was designed to meet the most complex needs that companies can face. Thanks to its advanced features, user-friendly interface, and commitment to continuous innovation, it has quickly become a standard in monitoring. New Relic offers extensive features to monitor and optimize application performance. First of all there is a dashboard. This Dashboard is a custom dashboard that is specific to each company that uses the software. New Relic has quite a few features, such as transaction monitoring. This allows you to have a view on all transactions made on the application. This provides visibility on all performance.

The benefits and the limitations :
The advantages of New Relic is that it is a software that can ensure a lot of things. As a real-time alert that allows to inform and intervene immediately in the event of a problem and this reduces the waiting time for the resolution of a problem. Another benefit of New Relic is that it offers API's to integrate with other IT applications such as AWS – Amazon Web Services, Amazon EC2, and Campfire. We can also have centralized monitoring of all the apps and hots. One of the limits is that the cost of the software is high, it can range from 0€ to 999€ per month. This can be an obstacle for small companies that do not necessarily have enough money to acquire this type of software. And also that the interface can be difficult to understand at first.

New Relic is a good software for companies looking for an advanced monitoring solution for their IT application and infrastructure. However, the cost and its potential complexity can be challenging for some companies. In conclusion, New Relic is a good monitoring software for companies that want to invest in a high quality monitoring solution.

In conclusion, New Relic positions itself as a powerful monitoring solution, offering complete visibility into the performance of applications and IT infrastructures. Its advantages include real-time monitoring, compatibility with modern architectures, easy integration with other tools, and a user-friendly interface.
